EDUCATION

University of Puerto Rico Mayagüez – Mayagüez, PR
B.S. Computer Science and Engineering

Graduation Date: May 2028
General GPA: 3.31

RELEVANT COURSEWORK

Data-Structures, Advanced-Programming, Fundamentals-of-Computing, Introduction-to-Software-Engineering, Analysis and Design of Algorithms

EXPERIENCE

MiUni-Developer-Mayaguez, PR

Jul 2025-Present

- Developed and implemented the app's tutorial onboarding system using Flutter and Clean Architecture principles, resulting in a fully functional onboarding experience that guides users through key features upon their first login.
- Developed a Pickleball tournament module using Flutter/Dart, implementing Clean Architecture and Cubit state management to ensure a scalable and testable codebase for team management and live score tracking.

LiDRON research-Developer-Mayaguez, PR

May 2026-Present

- Contributing to LiDRON, a research initiative sponsored by **Lockheed Martin**, focused on automating drone landing to reduce human error, supporting early-stage development of perception and control systems for automated landing.
- Engineered a cross-platform development pipeline between macOS (ARM64) and Ubuntu/Docker environments, implementing volume-mapped source synchronization to reduce build-test iteration cycles by 50% while ensuring 100% environment parity.
- Developed a real-time LiDAR perception pipeline in Python, implementing signal processing filters to clean raw point-cloud data and facilitate high-precision autonomous landing.

SkillsUSA-Technician and Programmer-Georgia, US

May 2023-Jul 2023

- Assembled and maintained the Scorbot robotic arm wiring components on the circuit board, ensuring optimal connectivity and functionality for competition performance.

PROJECTS

Flash-Cards App (Flutter, Dart)

Jul 2025-Aug 2025

- Developed a mobile flashcards app using Flutter & Dart to provide students and professionals with a clean, distraction-free study tool, built from scratch following Clean Architecture and BLoC/Cubit principles.
- Implemented core functionalities—deck creation, flashcard editing, dark/light mode, and offline persistence with Hive—to ensure a customizable and reliable user experience.

Esports-Organizer (Java-Script, html)

Jul 2025-Present

- Developed the Tournament Brackets Page using React, implementing interactive components to visualize real-time match progress and updates. This improved user engagement and allowed for clearer tournament tracking during events.
- Designed and prototyped the Team Profile Page in Figma to display dynamic team information, player statistics, and match history. Focused on creating a responsive layout and intuitive user experience, resulting in a more engaging and accessible interface for users.
- Managed version control with GitHub, maintaining scalable, testable code and applying structured commits and branches for clear project evolution.

Vehicle Reservation System (Java)

Apr 2025-May 2025

- Developed a multi-role vehicle reservation system for UPRM students, allowing users to register as clients, owners, or both, and manage vehicle reservations efficiently. Used Java with clear object-oriented design and modular packages for maintainable code.
- Implemented reservation logic, vehicle management, and station operations using HashMap, Stack, LinkedList, Queue, and ArrayList, including conflict validation, waitlist management, and undo/redo actions, ensuring a robust and reliable system.
- Enabled successful real-time reservations via the terminal, allowing students to reserve vehicles for use during classes or other campus activities, demonstrating fully functional system operation and practical usability.

Space Invaders (C++)

Apr 2024

- Debugged and enhanced a C++ Space Invaders game to resolve gameplay issues, refining collision detection, user input, and game mechanics for smoother, more reliable gameplay.
- Optimized performance without using external libraries, ensuring the game ran flawlessly and provided a seamless player experience.

SKILLS

- Dart, Flutter, React, Java, C++, Python, automation, Figma, Git, GitHub, teamwork, Docker
